

**SYSTEM, METHOD AND ARTICLE OF MANUFACTURE FOR AN
APPLICATION SERVER PROVIDER FRAMEWORK**

ABSTRACT

A system, method and article of manufacture are provided for improving an existing application infrastructure of an application service provider. First, a user is prompted to identify at least one aspect of an existing application infrastructure utilizing a network. Next, the identification of aspect of the existing application infrastructure is received utilizing the network. Such aspect of the existing application infrastructure is subsequently analyzed using a spreadsheet stored in a database. Further, improvements to the existing application infrastructure are suggested based on the analysis utilizing the network.
